## 1. Previous Next Product Configuration

Once you are finished with installing the extension it is time to proceed to your Magento 2 backend to finalize the Previous Next Product setup.

Before start using the extension we suggest running through the Previous Next Product extension settings and other options available to adjust the settings. This will help in better understanding of how the extension functions and what can you expect your previous next product to look and feel like.

## 1.1. Accessing the Extension Main Settings

The screenshot shows the Ulmod extension settings page. On the left is a dark sidebar with a vertical menu. The 'Stores' section is active, showing sub-items: Settings, All Stores, Configuration, Terms and Conditions, Order Status, Taxes, Tax Rules, Tax Zones and Rates, Currency, Currency Rates, and Currency Symbols. The 'Settings' item is highlighted. The main content area is titled 'Stores' and contains a 'Reload Data' button. Below this is a table with columns 'Tax', 'Shipping', and 'Quantity'. A callout box points to the 'Configuration' item in the sidebar.
